## WORK EXPERIENCE

---

### Application Developer

Tallahassee, FL

*Leon County Department of Health*

Jul 2024 - Present

- Automated manual intake and tracking workflows by building Power Apps and Flows in Power Automate, reducing processing time for the Technology Awareness Program across multiple staff members.
- Integrated SharePoint with Power Apps to centralize data entry and document management, replacing fragmented spreadsheet-based processes and improving audit compliance.

### Programmatic & Information Systems Intern

Cape Canaveral, FL / Remote

*NASA - ARES*

May 2023 - May 2024

- Developed a biomechanical joint force modeling plugin for Unreal Engine, enabling NASA customers to simulate musculoskeletal loads and support human spaceflight research.
- Reviewed and contributed to integration documents, including IT Mission Freeze Requirements.

### Teaching Assistant

Tallahassee, FL

*Florida State University*

Jan 2023 - May 2026

- Supported instruction across 7 courses including Discrete Math, C++, OOP, Computer Architecture, Unix, Physics, and Calculus, holding office hours and grading for 50+ students per semester.

## PROJECTS

---

### Model-Informed Drug Discovery Interface

- Built a desktop GUI application in C# and Avalonia (.NET) enabling pharmacologists to run and visualize model-informed drug discovery simulations without a programming background.

### Department of Health – Power Apps Suite

- Developed Canvas Power Apps for inventory management and purchasing tracking, streamlining operations and ensuring audit compliance for department staff.

### MERN Stack E-Commerce Application

- Built a full-stack shopping application using MongoDB, Express, React, and Node.js featuring user authentication, PayPal payment integration, and product management; deployed on Render.

### Linux From Scratch

- Compiled and configured a custom Linux OS from source, gaining hands-on experience with kernel configuration, bootloader setup, package management, and low-level system architecture.

### Recipe Recommender Web App using Prompt Engineering

- Designed and built a working full-stack recipe recommender (HTML/CSS/JS front-end, Flask back-end) by directing multiple LLMs through requirements gathering, system architecture, and code generation.

## EDUCATION

---

### Florida State University

Tallahassee, FL

*MS, Computer Science*

May 2026

*BS, Computer Science*

May 2024

## TECHNICAL SKILLS

---

- **Languages:** C/C++, C#, Java, Python (numpy, scipy, pandas), JavaScript, HTML, R, MIPS Assembly
  - **Frameworks & Libraries:** .NET / Avalonia, WPF, XAML, React.js, Node.js, Express, Flask
  - **Power Platform:** Power Apps, Power Automate, SharePoint integration
  - **Tools & Platforms:** Git, Visual Studio, VS Code, Azure, Jira, SonarQube, Unreal Engine, MongoDB
  - **Methodologies:** Agile, prompt engineering, requirements engineering, defect resolution
-
